And no, this pamphlet is not printed on hemp. Hemp paper is too expensive at this time.

All information herein was gleaned from the internet with simple google searches.

Knowledge is the key to helping our world become a cleaner place to live!

What is Hemp?

The Many Uses for Hemp.

Hemp - It's Time Has Come!

Hemp is not a drug nor is it psycho-active - meaning: it contains less than 0.3% THC (TetraHydroCannabinol). Hemp and marijuana are both cannabis but each are a different variety of the sativa species. Although Hemp looks like marijuana, it contains only fiber and seeds but none of the active chemical (THC) that creates the "high" people experience. The Hemp plant also includes the medicinal ingredient CBD (CannaBiDiol).

HEMP - *It's Time Has Come*

Hemp is a WEED like no other weed. It needs NO pesticides and less water to flourish. Cotton, wheat and corn, on the other hand, require tons of chemicals and 4 times the amount of water to produce a crop consumers will buy. Hemp can replace over 10,000 products - most notably, plastic, which makes Hemp environmentally friendly - and get this.... it comes from a plant - not oil (like plastic).

Like corn, Hemp can be used as a fuel additive ... better yet, the seeds can be converted into bio-diesel fuel. Hemp produces more "woody" material than timber, and in less time ... and is easier to handle. Hemp, in many cases, can replace steel; it is 10 times stronger (hard to believe, I know) and will not rust. Fabric from Hemp is more durable, comfortable and stronger than many materials today. Because Hemp contains CBD (CannaBiDiol) it has many health benefits. Those suffering with pain and a variety of other symptoms are finding CBD a better and cheaper alternative than pharmaceuticals.

We all know our lakes, streams, rivers and oceans (and that means fish, animals, birds, bugs... and you / us) are suffering, because of chemicals/pesticides used on

most farms. And pollutants (paints, sprays and other contaminants) can be found in most garages across America. It has been found that Hemp can extract nuclear contamination from soil.... a benefit we desperately need scattered about the world. degradable and thrives chemicals.

Were we to gradually re- place Hemp for steel, Hemp Hemp for oil, Hemp for phar- maceuticals, not only would use of harmful drugs, it the country productive ing and talking about Hemp we are all in this together, ered. We really need to in our communities and with our laws. Our infrastructure is ready for revamping, our farm soils need rebuilding, our waters need a good cleansing ... all possible with the use of Hemp.

Hemp can replace over 5000 products - most notably, plastic, which makes Hemp environmentally friendly - and get this ... it comes from a plant - not oil (like plastic).

with all the nuclear plants Hemp is completely bio- without the use of harmful place Hemp for steel, Hemp Hemp for oil, Hemp for phar- it benefit nature, eliminate would provide jobs to get again.
